

# Anchor™ 3L ST Fungicide

(Metalaxyl-M / Mefenoxam®)

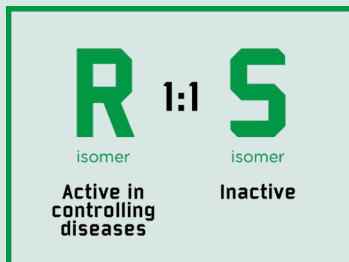

- NEW, SYSTEMIC FUNGICIDE
- TRUE LIQUID
- NO USELESS COMPONENTS

**LOWER USE RATE: USE LESS & GET SAME EFFECTIVENESS AS METALAXYL**

## METALAXYL

VS.

## ANCHOR™

Metalaxyl is a mixture consisting of equal amounts of the “R” and “S” isomers. The R isomer is active in controlling plant diseases. The S one is dead weight.

Anchor™ contains primarily the R isomer. This makes Anchor™ a true liquid, with no extra useless components. So you can use less fungicide to get the same effectiveness.

### REDUCED USE RATE

Having an R-isomer majority means you can reduce the amount of Anchor™ 3L ST (Mefenoxam®) needed to control disease. This cuts the use rate in half—allowing you to treat more with less.

It also gives you the ability to add more enhancements to the treatment—like extra polymers, inoculants or even another fungicide/insecticide.

### NO CRYSTALLIZATION

With Metalaxyl, under extreme temperatures, the S isomer becomes unstable and crystallizes. This results in a coarse, grainy material—impacting the flowability of the treatment.

With Anchor™ 3L ST (Mefenoxam®), the R isomer is in the majority, so the likelihood of crystallization is significantly reduced.

### IMPROVED SHELF LIFE

With no crystallization, the result is a longer shelf-life—with improved heat and cold product stability.

**BLENDABLE  
IN UAS SEED  
TREATMENTS**
